Test Comments: This plot was planted into very good soil conditions and emerged well. Before ear emergence, this site received strong winds that caused greensnap, especially in the full-season test. Dan DeRycke, our host grower, had 20+% of plants greensnapped in the field around the plot where yield varied from 150 to 225 bpa. The check hybrid was greensnap impacted in the full- but not the early-season test.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
