**Test Comments:** *Planting in this area was very difficult due to wet weather. Mark's field was not fit to plant until late May. Like other area fields, this was planted into marginal conditions. 2.4" rain fell after planting. In this wet soil, seedlings suffered & stands were reduced. Only 2 reps provided consistent reliable yield data and are presented above. Total rainfall, planting through maturity was 3" above normal.*

LSD (0.25) = 19.1 1.5 ns

**Yield & Income Factors:** Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.030 Prices: GMO = \$3.25; non-GMO = \$3.25

**Test Comments:** Same as the early test planted here, excessive spring rainfall reduced seedling emergence & final stands. Unfortunately, yield in 1.5 replications was impacted unlike 1 rep of the early-season test. These results are not reliable because good hybrids, that may have been in the Top 30, are not, due solely to placement in wet poor yielding areas. These results are deceptive. We highly discourage their use.
