**Test Comments:** *Early season moisture was adequate to get this site off to a great start. A dry period from late May to mid-June was relieved by a few small showers, below 1", in late June. July was dry but pollination was excellent. Ear tip die-back was not observed. Cool August temps slowed crop development but provided rain to fill deep kernels and increase test weight. Rainfall totals were 4.4" below avg.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
