TEST COMMENTS: *Below average rainfall for much of June and July resulted in limited vegetative growth and shorter plants than normal. Klint, our host grower, noted that some short varieties had excellent pod set and decent yields compared to taller varieties. Most rain occurred after seed fill, 3.2" during vegetative stages, 2" from bloom to full pod and 14.4" from beginning seed to maturity.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
