TEST COMMENTS: This site was planted in early June, just before the hot and dry stress set in. At harvest, plant height varied from 30 to 45 inches tall. Some taller products experienced some lodging. Some pod sets were far apart with small pods. No weed control issues here. One full-season rep lost due to rainfall during harvest of that rep and potential yield impact. Plot yields reflect the average yields in the area.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
