**Test Comments:** *Planting delays due to the wet spring were common in this area. Once in the ground, plants emerged quickly & evenly.*

*Rainfall was steady all year, but ponding was not a problem on this 2% slope site. Plant health was excellent during the season and while ear size was not exceptional, pollination was very good. Stalk integrity was declining among earlier hybrids but data quality was excellent.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
