Test Comments: *Planting conditions were very good. Plant emergence was very uneven. Some early season plant greensnap could be seen. The site endured nearly six weeks without rain, starting the last week of June into early August. At harvest, plants stood well. Ears had tip die-back and small kernels from the dry mid-season conditions. Area fields with better moisture capacity had higher yield averages.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
