Test Comments: *Planting was delayed in this area due to wet conditions. After planting, emergence looked very good. The area received strong storms during the summer months and caused some green snap. At harvest, stalks were weak and lodged. Ears were filled with deep kernels. Plants were well matured with strong cobs. A custom silage chopper accidentally harvested one rep in the full-season test.*

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
