### TEST COMMENTS:

*Planting season was a lesson in patience this spring. Getting this Webster clay loam to dry well enough for acceptable planting conditions can be a challenge. There were about 2 planting windows to plant your crop in northern Iowa this year: May 3-6 and May 13-16. Most of that time was dedicated to corn. That left a majority of soybean fields left to plant the first week of June, and this plot was no different. With late planting comes lower yield potential, but this crop made the most of very high fertility and well timed moisture through the season to exceed the 10 year average yield (55.9 bu/a) for this IANC region.*
