TEST COMMENTS:

Temperatures during the corn planting season were all over the board. From mid-April through the first week of May, it was a roller coaster from lows in the 20's to highs in the upper 70's, then back down again. Planting conditions were good when we planted the plot on April 29 and corn seedlings emerged well. A few showers early in the season were just barely enough to keep up with crop needs. One big storm on June 25 brought 2.2" of rain but most of that went down the cracks. A few more early July showers were recorded which added much-needed soil moisture ahead of pollination. The remainder of the season was very dry on this farm. With the exception of a few small scattered showers in August and September, the corn was stressed through grain fill producing plenty of tip-backed ears and shallow kernels.
